

Environmental Assessment and Management MSc

COURSE DETAILS

- Full-time: 12 months
- Part-time: 24 months

KEY DATES

- Apply by: [29 August 2025](#)
 - Starts: 22 September 2025
-

Course overview

On this taught programme, you'll gain an understanding of the environmental implications of development action and of the wider social, political and economic issues surrounding decisions about the environment.

INTRODUCTION

Across a series of compulsory and optional modules, you'll develop advanced environmental planning and management skills – along with the relationships and inherent challenges to overcome to plan for a healthy society.

You will learn to fully understand and practice various tools and techniques associated with environmental assessment and management, including data collection, infrastructure planning, and environmental management systems, with a view to providing you with opportunities of working within the field, as well as research, critical analysis and independent thinking.

You'll get to hear from active practitioners through client-led modules featuring guest lecturers and you will develop real-world skills that you will use throughout your career.

WHO IS THIS COURSE FOR?

This MSc is suitable for students from a wide range of disciplinary backgrounds i.e. your first degree can be from social, technical or natural sciences and in a subject not related to environmental sciences. This programme offers you the opportunity to seek career options in environmental assessment and management.

You will need a good 2:1 degree from an approved university or equivalent. Any first degree subject can be considered.

We also welcome non-traditional qualifications and relevant work experience which are considered on their individual merits.

WHAT YOU'LL LEARN

- How to evaluate challenges facing modern society in terms of the need to plan for a healthy environment and to manage it accordingly
 - How to evaluate the interrelationships between economic and social development and impacts on the environment at a variety of scales, and how to produce effective and implementable solutions to policy and planning dilemmas
 - A range of analytical skills and techniques designed to develop appropriate and implementable solutions to a range of complex environment related problems
 - Knowledge, skills and understanding to the achievement of environmentally friendly and feasible solutions to real-life problems
 - Assess the need to adopt strong professional values and ethics, recognising the diversity of interests in public and private decision making
 - Take part in exploring ideas, perspectives and debates in environmental assessment and management.
-

ACCREDITATION

This course is accredited by the [Institute of Environmental Management and Assessment \(IEMA\)](#).

IEMA is the professional body for everyone working in environment and sustainability. This course entitles students to free student membership for the duration of the course and on successful completion you qualify for GradIEMA.

Graduate membership is a launchpad for future leaders within environment and sustainability and offers a range of benefits to support you throughout your career. You can then "Fast track" to Practitioner Membership (PIEMA) following successful completion of the work-based assessment of competence.

Course content

Discover what you'll learn, what you'll study, and how you'll be taught and assessed.

SEMESTER ONE

In your first semester, compulsory modules will introduce you to the theory and practice of environmental assessment, teach you about the health origins and importance of environmental protection policy, and help you develop a critical understanding of the growing importance of environmental and sustainable development thinking in decision-making processes.

You'll work independently and in groups, attend interactive lectures, deliver presentations and take part in guest lectures from people currently working in the field.

Optional modules will offer you the chance to develop your education into areas which interest you the most, including the theory and practice of marine planning, the impact of people on the environment, or the issues facing society regarding access to basic needs such as housing, employment or transport.

Please see below for semester one modules. Click on the next tab for semester two modules.

In addition to compulsory modules, you must also choose one optional module in each semester.

COMPULSORY MODULES

POLITICS OF THE ENVIRONMENT (ENVS525)

Credits: 15 / Semester: semester 1

Increasingly recognition of the environmental threats that we all face means that responding to this crisis affects the decisions we all make at a variety of different scales. This module explores the extent to which environmental concerns are taken into account in various decision-making processes involving the public (government), private and third sectors at a variety of different scales, global, European, national and local. The module is assessed by an essay and an open-book exam, which provides students with significant choice to explore those parts of the module they find most interesting.

ENVIRONMENTAL ASSESSMENT OF POLICIES, PLANS, PROGRAMMES AND PROJECTS (ENVS529)

Credits: 15 / Semester: semester 1

Environmental Assessment is applied throughout the world in the preparation of policies, plans, programmes and projects several 10s of 1,000s of times each year. Whilst specific requirements differ between different countries, underlying conceptual and procedural ideas are similar in all contexts. This module introduces the environmental assessment process and applied methods and techniques as practiced both, nationally and internationally.

HUMAN HEALTH IN IMPACT ASSESSMENT (ENVS611)

Credits: 15 / Semester: semester 1

Human Health plays an increasingly important role in impact assessments in general and in environmental assessment in particular, both nationally and internationally. Requirements for the consideration of human health in environmental assessment changed in recent years and there is now a much stronger emphasis on making sure human health effects are adequately considered. In environmental assessment, this does not only include bio-physical determinants of health, but also socio-economic determinants. However, there is currently a very poor understanding of how this can be implemented in practice and the consultancy and public sectors are struggling to operationalise human health in environmental assessment. This module will help students appreciate what the consideration of human health means and how it can be achieved in practice. In this context, students will benefit from the activities of the University of Liverpool's World Health Collaborating Centre on Health in Impact Assessments. The module will be research and practice informed, enhancing employability. By definition, the module will come with authentic assessment, as the module will exclusively deal with authentic situations.

OPTIONAL MODULES

MARINE PLANNING THEORY AND PRACTICE (ENVS541)

Credits: 15 / Semester: semester 1

Marine planning is a new approach to the management of the seas and oceans, in the interests of marine nature conservation and the sustainable use of the seas for shipping, energy, fishing, minerals extraction, tourism, etc. It is developing as a means of organising the use of national sea space around the world. This module introduces the theoretical and practical aspects of marine planning for students with interests in spatial planning or marine science and management through a series of lectures. More advanced perspectives are provided through a series of seminars based on discussion of key foundational texts. Assessment is by three assignments: a student-led seminar, a presentation and an essay.

RESEARCH IN ANTHROPOCENE ENVIRONMENTS (ENVS485)

Credits: 15 / Semester: semester 1

Research in Anthropocene Environments provides an opportunity for students to be introduced to, and focus on, a wide range of potential topics at an early stage in their MSc studies, providing insight into how research spanning this broad theme is undertaken. The only condition for the topic that students select is that it addresses an aspect of an Anthropocene environment (defined here as one which is directly or indirectly human influenced). It is delivered by staff from across the School of Environmental Sciences whose research is intimately linked to the module title, also allowing students to gain a better insight into the wide range of topics that fall under this theme and what research is done in the school. Staff also talk briefly about their own paths into academia to highlight how research ideas and interests evolve. It is assessed by an abstract and a combined large poster/short oral presentation. The latter occurs during a day of presentations, which is designed to mimic an academic conference.

SPATIAL PLANNING CHALLENGES (ENVS411)

Credits: 15 / Semester: semester 1

This module provides students with an understanding of the conflicts facing planners in trying to deliver sustainable development. It introduces students to the range of social, economic and environmental issues that face contemporary society. It outlines the role of spatial planning in managing development pressures while protecting the built and natural environment, and it explores different planning responses to address and reconcile these competing interests.

Any optional modules listed above are illustrative only and may vary from year to year. Modules may be subject to minimum student numbers being achieved and staff availability. This means that the availability of specific optional modules cannot be guaranteed.

SEMESTER TWO

In your second semester, you'll further develop your environmental assessment skills with compulsory modules covering the historical and modern use of Green infrastructure planning, along with how businesses can influence the wider environmental agenda.

You'll also work on a group project where you'll apply your knowledge to create a tender document, which you will then present to a client and at a departmental conference.

Optional modules will help you develop your understanding of ecology and conservation, as well your independent thinking and critical insight skills.

In addition to compulsory modules, you must also choose one optional module in each semester.

COMPULSORY MODULES

BUSINESS AND THE ENVIRONMENT (ENVS470)

Credits: 15 / Semester: semester 2

Environmental issues are of growing importance to businesses both large and small. Companies and organisations have to comply with a burgeoning body of environmental legislation and environmental considerations are becoming more prominent in relations with industrial partners and clients, suppliers, customers, banks, insurers and local communities. Whilst such pressures are forcing businesses to pay more attention to the environmental implications of their actions, some businesses which are forward looking, perceive the environmental agenda as a great business opportunity. This module is designed to explore some of these issues more fully.

ENVIRONMENTAL PLANNING AND MANAGEMENT PROJECT (ENVS560)

Credits: 15 / Semester: semester 2

This is a client-led module, which is based upon the execution of a mini-project that is carried out in groups by students. The project allows the students to apply their knowledge of Environmental Assessment and Management (EAM) in practice and gain experience of being engaged with a real life client. This module essentially delivers authentic assessment. The project experience offered within the module helps in developing skills of analysis, interpretation and policy prescription within the context of EAM. They are well grounded in the Department's own research activities and draw upon established links with a number of local authorities and other public bodies.

GREEN INFRASTRUCTURE PLANNING (ENVS545)

Credits: 15 / Semester: semester 2

Green Infrastructure planning is essential in supporting the UN Sustainable Development Goals, especially in the global context of climate change. The module introduces the field of Green Infrastructure and green space planning by addressing its principles, values, utility, and its multiscale implementation within environmental planning from theoretical and practical perspectives through a series of lectures and guest talks. Students will understand the interconnection between greening and human beings with support from a series of qualitative and quantitative methods and learn to critically assess what methods are appropriate for the evaluation GI development. Students will undertake tasks that mirror real-world professional practices, which helps them to learn and practically use the skills they may require to evaluate the role and multiple benefits of Green Infrastructure in real-world planning scenarios. Assessment is through an essay and a project poster.

OPTIONAL MODULES

CONSERVATION MANAGEMENT (ENVS423)

Credits: 15 / Semester: semester 2

Biodiversity, the Earth's support system, is in decline. Conservation of remaining ecosystems and restoration of disturbed ones is essential and urgently needed. Here we cover controversial issues and current debates in conservation with topics covering approaches to protected area management (terrestrial and marine), ecosystem restoration and conservation policy. The module is run as a dynamic, interactive advanced tutorial course. The sessions are mostly run as lectures with background reading and discussion led by a member of staff, but also include seminars, group work and student presentations.

MAKING PLANS (ENVS427)

Credits: 15 / Semester: semester 2

This module provides a knowledge base of spatial planning disciplines by understanding key historical evolution of plan-making approaches, being conversant with methods and techniques used in the preparation and implementation of spatial plans and policies, and last but not least, demonstrating critical thinking capacities of reviewing a contemporary plan-making practice through a close theory-practice axis.

MONITORING URBAN AIR POLLUTION (ENVS666)

Credits: 15 / Semester: semester 2

Liverpool's air quality, much like many other UK's cities, is some of the worst in Europe. Whilst we might understand how it is produced, complex urban layouts and meteorological conditions make it almost impossible to understand how it mixes, disperses and stagnates in our cities; the only way in which we can monitor this is to sense our cities. This research-based module focuses on students using statistical tools to interpret data from University of Liverpool outdoor pollution sensors, Liverpool City Council outdoor sensors, and Government sensors, as well your own sensor that students construct as part of this module. The module content will be provided in the first three weeks after which students will work on research-based projects, with intensive supervision. The module's assessment gives students a taste of both the industry driven and academic world through a consultancy style group report and mimicking the process of presenting a paper at an academic conference.

Any optional modules listed above are illustrative only and may vary from year to year. Modules may be subject to minimum student numbers being achieved and staff availability. This means that the availability of specific optional modules cannot be guaranteed.

FINAL PROJECT

Starting with a workshop to develop your primary research skills, such as research design, literature searching, research methods and more, your final semester will be devoted to developing, researching and executing an independent piece of research on the topic relating to your speciality.

Initially, you will present your research outline to your, followed by a more detailed outline and, ultimately, a dissertation on your choice of research question. There will be plenty of chances to check in with an academic member of staff, either online or in-person, to discuss your research project over the course of the semester.

COMPULSORY MODULES

DISSERTATION MCD/MA/MSC PLANNING (ENVS491)

Credits: 60 / Semester: summer

The module supports students in the development, researching and execution of an independent piece of research under the supervision of an academic member of staff.

Any optional modules listed above are illustrative only and may vary from year to year. Modules may be subject to minimum student numbers being achieved and staff availability. This means that the availability of specific optional modules cannot be guaranteed.

HOW YOU'LL LEARN

To make sure you get a well-rounded education, we use a combination of different teaching styles, like lectures, seminars, tutorials, and practical sessions like group projects and field visits. All the course materials are waiting for you on the teaching homepage, so you can easily access what you need.

We want you to take an active role in your learning journey, so we encourage you to plan and organize your studies, whether that's on your own or with a group. Don't be shy about participating in class discussions, seminars, and library and IT studies. And make sure to get some real-world experience through practice contacts and site visits related to your coursework submissions.

HOW YOU'RE ASSESSED

We use a mix of assessment methods, like coursework like essays, reports, and seminar presentations, as well as exams.

These assessments give you a chance to dive deep into specific parts of the course and show off your writing skills for different audiences. You'll also have the chance to practice your speaking skills with seminar presentations and work as part of a team on group projects.

You'll get to demonstrate your knowledge, understanding, and critical thinking skills during exams and in a final research project in the summer.

LIVERPOOL HALLMARKS

We have a distinctive approach to education, the Liverpool Curriculum Framework, which focuses on research-connected teaching, active learning, and authentic assessment to ensure our students graduate as digitally fluent and confident global citizens.

Careers and employability

There's high demand for graduates with a degree in environmental assessment and management, and your prospects should only get better with this master's. Plus, the program is accredited by the IEMA, which will help enhance your profile and boost your employability. It's a great time to be entering this field.

Career support from day one to graduation and beyond

-

Career planning

Our Careers Studio and career coaches can provide tailored support for your future plans.

-

From education to employment

Employability in your curriculum for a successful transition

•

Networking events

[Make meaningful connections with like-minded professionals](#)

YOUR FUTURE

After completing the program, you'll be well equipped to pursue a variety of career paths in the public and private sector, including environmental consulting. You may even opt to work for environmental charities or continue your education with an advanced degree or research position.

Fees and funding

Your tuition fees, funding your studies, and other costs to consider.

TUITION FEES

UK fees (applies to Channel Islands, Isle of Man and Republic of Ireland)	
Full-time place, per year	£12,500
Part-time place, per year	£6,250

International fees	
Full-time place, per year	£24,100
Part-time place, per year	£12,050

Fees stated are for the 2025-26 academic year.

Tuition fees cover the cost of your teaching and assessment, operating facilities such as libraries, IT equipment, and access to academic and personal support.

- You can [pay your tuition fees in instalments](#).
- All or part of your tuition fees can be [funded by external sponsorship](#).
- International applicants who accept an offer of a place will need to [pay a tuition fee deposit](#).

If you're a UK national, or have settled status in the UK, you may be eligible to apply for a Postgraduate Loan worth up to £12,167 to help with course fees and living costs. [Learn more about fees and funding](#).

ADDITIONAL COSTS

We understand that budgeting for your time at university is important, and we want to make sure you understand any course-related costs that are not covered by your tuition fee. This could include buying a laptop, books, or stationery.

Find out more about the [additional study costs](#) that may apply to this course.

SCHOLARSHIPS AND BURSARIES

We offer a range of scholarships and bursaries that could help pay your tuition and living expenses.

We've set the country or region your qualifications are from as United Kingdom. [Change it here](#)

- [International students](#)

- [Completed a Pre-Master's at University of Liverpool International College \(UoLIC\)? We're offering a £5,000 fee discount off the first year of master's study to some of the highest achieving students joining one of our non-clinical master's courses from UoLIC.](#)

- **UNIVERSITY OF LIVERPOOL INTERNATIONAL COLLEGE IMPACT PROGRESSION SCHOLARSHIPS**

- [International students](#)

- [If you're a University of Liverpool International College student awarded a Kaplan Impact Scholarship, we'll also consider you for an Impact Progression Scholarship. If selected, you'll receive a fee discount worth £3,000 off the first year of your master's course.](#)

- **VICE-CHANCELLOR'S INTERNATIONAL ATTAINMENT SCHOLARSHIP FOR MAINLAND CHINA**

- [International students](#)

- [China](#)

- [Are you a high-achieving graduate from the People's Republic of China with a degree from a Chinese university? You could be eligible to apply for a £5,000 fee discount if you're joining an eligible master's course. Up to 15 eligible students will receive this scholarship.](#)

Entry requirements

The qualifications and exam results you'll need to apply for this course.

Your qualification	Requirements About our typical entry requirements
GCSE	4/C in English and 4/C in Mathematics
Postgraduate entry requirements	We accept a 2:2 honours degree from a UK university, or an equivalent academic qualification from a similar non-UK institution. This degree can be in any subject discipline.
International qualifications	Many countries have a different education system to that of the UK, meaning your qualifications may not meet our entry requirements. Completing your Foundation Certificate, such as that offered by the University of Liverpool International College , means you're guaranteed a place on your chosen course.
