

1 **General Data Protection Regulation (GDPR) and research: a guidance note**

2 This note seeks to help prepare researchers to ensure regulatory compliance
3 following the introduction of the UK General Data Protection Regulation (UK GDPR);
4 and to meet best practice in research ethics and governance.

5 This note is not intended as the final authority on data protection regulations.
6 Researchers should always consult with the UK GDPR, the [Data Protection Act](#)
7 [2018](#), the [Information Commissioner's Office guidance](#), guidance from the regulatory
8 authorities such as the [Health Research Authority](#), and colleagues in [Legal and](#)
9 [Governance](#) for definitive guidance on data protection practice. This note should be
10 read in conjunction with the resources set out in the '[Determining the lawful basis](#)'
11 section of this document.

12 Background

13 At time of writing, the UK's data protection legislation comprises of two main pieces
14 of legislation, the UK General Data Protection Regulation which has been adopted
15 into UK law and amended to fit the UK's needs following Brexit. This legislation is
16 complemented by the Data Protection Act 2018, which provides specific exemptions
17 and schedules specific to UK institutions and needs. Together, the two pieces of
18 legislation set out how UK institutions should manage personal data.

19 ***Defining personal data***

20 'Personal data' includes pseudonymised data, and is defined as:

21 "... any information relating to an identified or identifiable natural
22 person ('data subject'); an identifiable natural person is one who can
23 be identified, directly or indirectly, in particular by reference to an
24 identifier such as a name, an identification number, location data, an
25 online identifier or to one or more factors specific to the physical,

26 physiological, genetic, mental, economic, cultural or social identity of
27 that natural person.”¹

28 Reviewing your practices for the processing of personal data

29 Researchers should regularly review the steps in place to protect personal data.
30 Elements such as consent processes, transparency information, and your
31 mechanisms for data storage and data use should be subject to ongoing review to
32 ensure that good practice standards are met and that participant’s rights and wishes
33 are respected.

34 Providing information on the lawful basis for processing personal data to research 35 participants

36 The UK General Data Protection Regulation requires each activity of processing data
37 to have a lawful basis.

38 For studies falling under the Department of Health framework, the Health Research
39 Authority have produced [guidance](#) on the requirements for providing information on
40 the lawful basis to research participants, and this guidance must be followed for
41 studies requiring review by the Health Research Authority.

42 The University processes personal data as part of its research and teaching activities
43 in accordance with the lawful basis of ‘public task’, and in accordance with the
44 University’s [Supplemental Charter](#) which states that the purpose of the University
45 “shall be to advance education, learning and research for the public benefit”.

¹ [General Data Protection Regulation, Article 4](#) (a definition of pseudonymised is provided in Article 4)

46 Further information on fulfilling the requirements for using public task as your lawful
47 basis for processing personal data can be found in the resources section below.

48 In order to inform research participants about the lawful basis on which you are
49 processing their personal data, you will need to use the University [template](#)
50 [participant forms](#).

51 Participant information sheets and consent forms

52 In order to ensure compliance with the GDPR principles, researchers should use the
53 latest template participant information sheets provided either by the [University](#) for
54 studies approved by a University research ethics committee; or by the [Health](#)
55 [Regulatory Authority](#) for studies approved by a NHS research ethics committee.

56 All information provided to participants must be concise, transparent, in easily
57 accessible form, and made using clear and plain language to meet the needs of the
58 audience. Please see the guidance below for information on informed consent.

59 The University's template participant information sheets and consent forms, **are**
60 available at:

61 [Research ethics webpages - template participant forms](#)

62 The only exception to the requirement to use the University templates would be
63 where these documents need to be tailored to meet the needs of the research
64 population; for example, child-friendly forms which may include pictures and
65 diagrams.

66 International transfer of data

67 The General Data Protection Regulation applies whenever personal data is
68 transferred out of the EU, and the Regulation imposes specific restrictions on the
69 transfer of personal data outside the European Union to third countries or

70 international organisations. For the purposes of data protection, the UK is classed as
71 “adequate” and is free to transfer data within the EU with no additional obligations.

72 Personal data may only be transferred outside of the EU in compliance with the
73 conditions for transfer set out in Chapter V of the General Data Protection
74 Regulation.²

75 Where practical and appropriate, the University should have a contract or similar
76 agreement with the party (or parties) regularly receiving the data outside the EU, this
77 contract must include appropriate data protection clauses.

78 Where the University is transferring personal data outside the EU on an irregular or
79 ad-hoc basis, this is only permitted where the transfer is:

- 80 ▪ made with the individual’s informed consent
- 81 ▪ necessary for important reasons of public interest³

82 When transferring personal data outside the EU, you must ensure that you have
83 informed consent from research participants to cover the transfer. You must also
84 ensure that the arrangements for protecting the confidentiality of the data meet the
85 highest levels of confidentiality and security.

86 The [IT Services Department](#) can provide advice on the security mechanisms that
87 can be used to protect personal data when transferring data outside of the EU.

² [General Data Protection Regulation, Chapter V](#)

³ [Information Commissioner’s Office: International transfers](#)

88 General good practice in data collection and management

89 The General Data Protection Regulation offers an opportunity to review and refresh
90 existing practices to ensure that they meet recommended best practice standards
91 and regulatory requirements in the collection and management of personal data
92 collected during research. Please visit the University's [research data management](#)
93 [webpages](#) for additional guidance.

94 Informed consent

95 The definition of consent outlined when using consent as the lawful basis for
96 processing personal data has been refined in the Regulation as: “any freely given,
97 specific, informed and unambiguous indication of the data subject’s wishes by which
98 he or she, by a statement or by a clear affirmative action, signifies agreement to the
99 processing of personal data relating to him or her”.⁴ Whilst this represents good
100 practice in obtaining consent for a wide range of activities, is recognised that
101 research studies will not normally be able to meet these requirements, which is why
102 the University uses ‘public task’ as it’s lawful basis for processing personal data.
103 However, it should be emphasised that this does not affect the ethical importance of
104 consent or the common law requirements for consent.

105 It is important to distinguish between consent for a participant to join a study or
106 consent required under the common law duty of confidentiality from consent to
107 process personal data under the GDPR. It is highly unlikely consent is the best lawful
108 mechanism to use personal data in most instances.

109 Consent means offering individuals real choice and control. Genuine consent should
110 put individuals in charge, build trust and engagement, and enable participants to
111 decide whether or not to take part in the study.

⁴ [General Data Protection Regulation](#), Article 4

112 The following extract outlines some of the good practice considerations for obtaining
113 informed consent:

- 114 ▪ Consent should be a positive opt-in
- 115 ▪ Explicit consent requires a very clear and specific statement of consent in words,
116 rather than by any other positive action
- 117 ▪ Keep your consent requests separate from other terms and conditions
- 118 ○ Avoid making consent to processing a precondition of any service you are
119 offering
- 120 ▪ Keep evidence of consent – who, when, how, and what you told people.
- 121 ○ Participant consent forms should be stored securely and confidentially
- 122 ▪ The participant information sheet and consent forms should:
 - 123 ○ Outline the lawful basis, ‘public task’, on which the University processes
124 personal data (and the condition for processing if sensitive data is collected)
 - 125 ○ Be specific and granular where possible to get separate consent for separate
126 things
 - 127 ○ Explain why you want the data (purpose), and you will do with it (intended
128 use), and how long the data will be stored
 - 129 ○ Explain who, if anyone, the data will be shared with; and in what format the
130 data will be shared
 - 131 ○ Highlight what you are doing to ensure the security of personal information
 - 132 ○ Be clear, concise, user friendly

- 133 ○ Make it easy for people to withdraw consent to participate in research, and tell
134 them how they can withdraw their participation (explaining any limitations to
135 withdrawing or deleting their data)
- 136 ○ Explain that the participant has the right to complain to the University and the
137 Information Commissioner's Office if they are unhappy with the data
138 management
- 139 ○ Contain the contact details of the Principal Investigator and the University of
140 Liverpool Data Protection Officer
- 141 ■ Keep consent under review, and refresh it if anything changes.

142 You must keep clear records to demonstrate consent; and these must be stored
143 securely and confidentially.

144 It should be noted that it may not always be possible to achieve the gold standard
145 criteria for consent as outlined above. Explicit and granular consent is not always
146 compatible with recommended good practice in certain types of research. For
147 example, consent obtained for research using human material samples often lacks
148 'explicit consent', as to do so could lead to the unnecessary destruction of a unique
149 resource. In such cases, a broader consent is obtained to allow the future use and
150 sharing of personal data under certain conditions which have been reviewed and
151 approved by a research ethics committee.

152 Research data management

153 Under the General Data Protection Regulation, there is a greater emphasis on
154 implementing safeguards for personal data. This means that you should give
155 consideration to the arrangements for the security and storage of data; ensure that
156 data are pseudonymised or anonymised wherever possible, and as early as
157 possible; and that personal data are only collected when needed (known as 'data

158 minimisation'). If you can undertake some or all of your research activities without
159 using identifiable personal data, you must make arrangements to do so.⁵

160 Primary responsibility for the management of data produced during research
161 activities lies with the Principal Investigator (or Supervisor). Where research is
162 conducted with other institutions and independent researchers, University of
163 Liverpool researchers are responsible for the management of research data held by
164 the University that is under their own control.⁶

165 The following extract outlines some of the good practice considerations for research
166 data management:

167 ▪ Wherever possible, data should be anonymised or pseudonymised. Personal
168 data can only be disclosed when explicit and documented permission to disclose
169 is part of the consent procedure.⁷

170 ▪ Store data on a secure and regularly backed up site - this should be on server
171 systems operated by the University's IT Services Department (University network
172 drive)⁸

173 ○ Storage of data on locations other than the University networked drives
174 should be approved by Information Security colleagues in the Computing
175 Services Department

176 ○ Further information on the correct processes for storing your research data
177 can be found on the [Research Data Management webpages](#)

⁵ [Health Research Authority: Guidance for Researchers](#)

⁶ [University Research Data Management Policy](#)

⁷ [University Policy on Research Ethics](#)

⁸ [University Information Security Policy](#)

- 178 ▪ apply technical controls to limit access to the data
- 179 ○ University network drives and Microsoft SharePoint contain features which
180 enable users to limit access to the data
- 181 ▪ use encryption to digitally secure the data
- 182 ○ Further information on encryption can be found on the [IT Services](#)
183 [webpages](#)
- 184 ▪ ensure that hard copies of any data (that cannot be digitised) are held in a
185 physically secure location
- 186 ○ For student projects, hard copies of any personal data should be kept in a
187 locked filing cabinet in the Supervisor's office
- 188 ▪ provide secure deletion and destruction facilities
- 189 ○ Colleagues in [Records Management](#) and [IT Services](#) can advise on
190 retention and disposal of research data
- 191 ▪ Sharing personal data should only be done with the consent of research
192 participants
- 193 ○ A research ethics committee (or in the case of NHS research, the
194 Confidential Advisory Group) should review any proposal to share data
195 without participant consent

196 The confidentiality of the information supplied by research participants and the
197 anonymity of respondents must be respected.

198 Sensitive personal data

199 The Regulation refers to sensitive personal data as “special categories of personal
200 data” in Article 9 of the regulation. Sensitive personal data includes information
201 revealing an individual’s:

202 ▪ racial or ethnic origin;

203 ▪ political opinions;

204 ▪ religious or philosophical beliefs;

205 ▪ trade union membership;

206 ... or involves the processing of:

207 ▪ genetic data;

208 ▪ biometric data for the purpose of uniquely identifying a natural
209 person;

210 ▪ data concerning health

211 ▪ data concerning a natural person's sex life

212 ▪ data concerning a natural person's sexual orientation.⁹

213 Special category data is personal data which the Regulation says is more sensitive,
214 and so needs more protection as this type of data could create more significant risks
215 to a person’s fundamental rights and freedoms.

⁹ [General Data Protection Regulation](#), Article 9

216 A [data protection impact assessment](#) is required for processing that is likely to result
217 in a high risk to individuals – for example, where any special category data is
218 processed. The data security measures should be as rigorous as possible when
219 processing sensitive personal data.

220 If you are processing special category data, you will need to outline both the lawful
221 basis for processing ('public task') and the separate condition for processing this
222 data. The condition on which the University processes special category data is that
223 the "processing is necessary for archiving purposes in the public interest".

224 Please refer to the [Information Commissioner's Office guidance on special category](#)
225 data for further information on the conditions.

226 When processing special category or criminal offence data, it must be recognised
227 that the risk to the rights and freedoms of persons are heightened from processing
228 this data; as processing may give rise to discrimination, financial loss, damage to the
229 reputation, loss of confidentiality of personal data, and any other significant
230 economic or social disadvantage. Therefore the likelihood and severity of the risk to
231 the rights and freedoms of the data subject should be carefully considered alongside
232 the nature, scope, context and purposes of the processing to determine whether
233 processing is necessary and whether the safeguards mitigate the risk.

234 Criminal offence data

235 Article 10 applies to personal data relating to criminal convictions and offences, or
236 related security measures. Criminal offence data includes the type of data about
237 criminal allegations, proceedings or convictions that would have been sensitive
238 personal data under the 1998 Act; including personal data linked to related security
239 measures.

240 Processing of personal data relating to criminal convictions and offences can be
241 carried out only under the control of official authority or when the processing is

242 authorised by Union or Member State law providing for appropriate safeguards for
243 the rights and freedoms of data subjects.¹⁰

244 If you are processing criminal offence data, you will need both a lawful basis for
245 processing ('public task') and a separate condition for processing this data under
246 Article 9. This can be met using Article 9 (2) (j) – the condition for scientific and other
247 research. This condition is then further qualified by the additional condition housed at
248 Schedule 1, Section 1, Paragraph 4 of the Data Protection Act 2018.

249 Please refer to the [Information Commissioner's Office guidance on criminal offence](#)
250 data for further information.

251 Human Material, consent and GDPR

252 The consent provisions for the collection and storage of human material are
253 unchanged by the implementation of the General Data Protection Regulations
254 (GDPR). Consent remains a requirement of Common Law and the common law duty
255 of confidentiality¹¹ is not affected by the implementation of GDPR. The Human
256 Tissue Authority (HTA) have therefore not provided any changes to the current
257 advice or guidance on this matter (HTA COP A: Guiding Principles and the
258 Fundamental Principle of Consent¹²).

259 The University's guidance on best practice for consent involving human material can
260 be found by referring to -The University of Liverpool Human Material Code of

¹⁰ [General Data Protection Regulation](#), Article 10

¹¹ <https://www.health-ni.gov.uk/articles/common-law-duty-confidentiality>

¹² [Human Tissue Authority Codes of Practice](#)

261 Practice-HTA003¹³ and The University of Liverpool supporting document-Consenting
262 for research SDS001¹⁴.

263 As outlined in earlier sections, the Implementation of GDPR does change the
264 requirements for organisations to hold and process personal data and special
265 categories of personal data.

266 Consent to participation in research is not the same as consent as the legal basis for
267 processing under data protection legislation. Consent is obtained for participation in
268 research, but the lawful basis which the data collected will be processed under is
269 defined in the study transparency statement.

270 Guidance produced by the Medical Research Council (MRC) and the Health
271 Research Authority (HRA) state that for public authorities such as Universities, NHS
272 organisations, Research Council institutes or other public authority the lawful basis
273 under which they hold and use personal data is most likely to be GDPR Article 6(1)
274 (e)⁶ a **‘task in the public interest’**¹⁵¹⁶

275 GDPR Article 6(1) (e) *“Processing is necessary for the **performance of a***
276 ***task carried out in the public interest** or in the exercise of official authority*
277 *vested the controller;”*

278 You should note that if it would be possible to undertake your research without
279 processing personal data then your intended legal basis will not be valid.

¹³ [University Human Material Policies and Standard Operating Procedures](#)

¹⁴ See footnote 13

¹⁵ [UK Research and Innovation GDPR: Lawful basis, research and confidentiality guidance note](#)

¹⁶ [Health Research Authority GDPR guidance - Consent in research](#)

280 The MRC⁵ have also provided guidance on which of the separate conditions from
281 Article 9 would most likely be used by public authorities to hold and use special
282 categories of personal data

283 GDPR Article 9(2) (j)

284 “Processing is necessary for archiving purposes in the public interest,
285 scientific or historical research purposes or statistical purposes in accordance
286 with Article 89(1) based on Union or Member State law which shall be
287 proportionate to the aim pursued, respect the essence of the right to data
288 protection and provide for suitable and specific measures to safeguard the
289 fundamental rights and the interests of the data subject”¹⁷.

290 Further processing of data

291 When personal data has been collected from a data subject but the controller (either
292 the University or the Sponsor) intends to further process the data for a different
293 purpose, the controller must also give the data subject information about that further
294 purpose before the data is processed. An example is that researchers may wish to
295 use personal data originally collected for clinical or local audit for research.

296 However, if the information about further processing is in fact the same as the
297 information for the original processing, the data controller does not need to give the
298 data subject that information again¹⁸.

¹⁷ <http://www.privacy-regulation.eu/en/article-9-processing-of-special-categories-of-personal-data-GDPR.htm>

¹⁸ <https://www.hra.nhs.uk/planning-and-improving-research/policies-standards-legislation/data-protection-and-information-governance/gdpr-detailed-guidance/transparency/>

299 Reporting requirements

300 The Regulation introduces a duty on all organisations to report personal data
301 breaches to the relevant supervisory authority. You must do this within 72 hours of
302 becoming aware of the breach, where feasible.

303 As soon as you become aware of a personal data breach, you must report this to the
304 Director of Legal and Governance, Mr Kevan Ryan (kevan.ryan@liverpool.ac.uk)
305 and the University Data Protection Officer, Mr Dan Howarth
306 (dhowarth@liverpool.ac.uk) who will then advise on the next steps for handling the
307 breach.

308 Additional notes

309 Although the theme of the General Data Protection Regulation is around
310 empowering individuals' data rights and reshaping the way organisations approach
311 personal data processing, there are a number of areas where the Regulation does
312 not provide specific and conclusive authority with regard to research.

313 For example, there are no specific provisions to cover the collection of data obtained
314 from behavioural observation studies, the use of data which is available in the public
315 domain, etc. In such areas where there is no specific legislative provision, the spirit
316 of the Regulation, existing common law, and best practice guidance should be
317 considered when reviewing the processing of the personal data. Relevant
318 considerations should be reflected upon in your research ethics applications.

319 Determining the lawful basis for processing personal information in research

320 The General Data Protection Regulation requires each activity of processing data to
321 have a lawful basis. There are around six lawful bases for processing personal data.
322 The Information Commissioner's Office have produced a '[Lawful basis guidance tool](#)'
323 to help determine the most appropriate lawful basis for your processing.

324 For studies falling under the Department of Health framework, please see the [Health](#)
325 [Research Authority guidance](#) on the lawful basis for processing.

326 The University processes personal data as part of its research and teaching activities
327 in accordance with the lawful basis of 'public task', and in accordance with the
328 University's [Supplemental Charter](#) which states that the purpose of the University
329 "shall be to advance education, learning and research for the public benefit". Further
330 information on fulfilling the requirements for using public task as your lawful basis for
331 processing personal data can be found below.

332 Public interest

333 The Health Research Authority note "For health and social care research, the legal
334 basis is determined by the type of organisation: for universities, NHS organisations
335 or Research Council institutes the processing of personal data for research will be a
336 'task in the public interest'".¹⁹

337 When relying on 'public interest' as the lawful basis for processing, the following
338 points need to be considered:

- 339 ▪ Are you processing the data to carry out your official tasks or functions, or other
340 specific tasks in the public interest?
- 341 ○ The University considers the collection of personal data for the purposes
342 of advancing education, learning and research to be a public task
- 343 ▪ Can you point to a clear basis in law for your task or function?

¹⁹ [Health Research Authority: GDPR Operational Guidance](#)

344 ○ The University considers the advancement of education, learning and
345 research to be the basis in law for the collection of personal data in
346 research

347 ▪ Is there another reasonable way to perform your tasks or functions without
348 processing the data?

349 ○ The processing must be necessary. If you could reasonably perform your
350 tasks or exercise your powers in a less intrusive way, this lawful basis
351 does not apply.

352 You need to be sure that you can demonstrate why processing is necessary to
353 perform a task in the public interest and that there is no other reasonable way to
354 perform the task without processing personal data. Remember to include information
355 about your purposes and lawful basis in your participant information sheets.

356 Refer to the [Information Commissioners Office guidance](#) for further information on
357 the use of ‘public interest’ as the lawful basis for processing.

358 It is important to note that although ‘public interest’ – and not ‘consent’ - is likely to be
359 the lawful basis under which personal data is held and processed, the ethical and
360 common law requirements of consent are not reduced.
