Alphabetical List of Authors . . . . . **v**

PART I — Modelling High Frequency Radiation and Scattering 1

1 Implementation of a Boundary Element Method for High Frequency Scattering by Convex Polygons **2**

by **Stephen Langdon** and **Simon N. Chandler-Wilde** 2

1.1 Introduction 2

1.2 Galerkin boundary element method 3

1.3 Implementation and integral formulae 6

1.4 Numerical evaluation of highly oscillatory integrals 9

References for Chapter 1 11

2 Some Results on Modelling High Frequency Acoustic Radiation **12**

by **Paul J. Harris** and **Ke Chen** 12

2.1 Introduction 12

2.2 Boundary integral method for the exterior Helmholtz equation 13

2.3 A quadrature method for evaluating oscillatory integrals 14

2.4 Evaluation of integrals with piecewise linear approximations 16

2.5 Numerical results 17

References for Chapter 2 19

3 The Efficient Evalution of Highly Oscillatory Integrals in BEM by Analytic Continuation **20**

by **Daan Huybrechs** and **Stefan Vandewalle** 20

3.1 Introduction 20

3.2 Review of the one-dimensional case 21

3.2.1 The ideal case without stationary points 22

3.2.2 Stationary points 23

3.3 Application to double integrals in BEM 23

3.3.1 A family of double integrals 23

3.3.2 A decomposition for the inner integration 24

3.3.3 A decomposition for the outer integration 25

3.3.4 A total decomposition for the double integral 26

3.3.5 Singular integrals . . . 27
3.3.6 Limitations of the approach . . . 28
3.4 Numerical results . . . 28
3.5 Application to three-dimensional problems . . . 29
References for Chapter 3 . . . 29

PART 2 — Boundary Elements in Coupling Problems 31

4 Preconditioners for the Coupled System of Natural BEM and FEM (Invited) 32
by **Sheng Zhang** and **Dehao Yu** . . . 32
4.1 Introduction . . . 32
4.2 Model problem and natural boundary reduction . . . 33
4.3 Some preconditioners . . . 36
4.4 Numerical results . . . 38
References for Chapter 4 . . . 40

5 A Recursive Boundary Element based Method for the Cauchy Problem in Linear Hydrodynamics 42
by **T. Johansson** and **D. Lesnic** . . . 42
5.1 Introduction . . . 42
5.2 The fluid model . . . 43
5.3 A regularizing procedure for the model problem . . . 44
5.4 Well-posedness and traces of the associated problems . . . 44
5.5 Convergence of the regularizing procedure . . . 46
5.6 A boundary element formulation . . . 47
5.7 Numerical results . . . 48
References for Chapter 5 . . . 49

6 On the Significance of Fluid-Structure Coupling for Non-Harmonic Periodic Acoustic Radiation 52
by **Paul J. Harris, D. J. Chappell, D. Henwood** and **R. Chakrabarti** . . . 52
6.1 Introduction . . . 52
6.2 Formulation of the Fourier series method . . . 53
6.2.1 The structural FEM problem . . . 53
6.2.2 The exterior acoustic BEM problem . . . 54
6.2.3 Coupling of the FEM and BEM Fourier series method . . . 55
6.2.4 Fully coupled versus uncoupled . . . 57
6.3 Numerical results for a sphere . . . 58
6.3.1 On the choice of force vector . . . 58
6.3.2 Numerical examples . . . 59
6.4 Conclusion . . . 62
References for Chapter 6 . . . 63

7 BEM Analysis of Thin Film Flows with Variable Marangoni Surface Shear Stress 64
by **N. H. Shuaib** and **H. Power** . . . 64
7.1 Introduction . . . 64

7.2 Problem formulation . . . 65
7.3 Numerical procedure . . . 69
7.4 Numerical results . . . 71
7.5 Conclusion . . . 72
References for Chapter 7 . . . 73

8 Improved Boundary Conditions for Boundary Integral Equations 74
by **Stefan Schneider** . . . 74
8.1 Introduction . . . 74
8.2 Modeling of boundary conditions . . . 74
8.3 Numerical examples . . . 76
8.3.1 Example I . . . 76
8.3.2 Example II . . . 78
8.4 Conclusion . . . 79
References for Chapter 8 . . . 80

PART 3 — Generalized Boundary Elements for PDEs 81

9 The Computational Differential Algebraic Geometrical Method of Constructing the Fundamental Solutions of System of PDEs (Invited) 82
by **H. Q. Zhang** and **J. Q. Mei** . . . 82
9.1 Introduction . . . 82
9.2 The computational differential algebraic geometrical method . . . 83
9.3 Applications . . . 87
9.4 Conclusion . . . 89
References for Chapter 9 . . . 89

10 Fundamental Solution for Some Equations in Magnetohydrodynamic Flow 90
by **Canan Bozkaya** . . . 90
10.1 Introduction . . . 90
10.2 Basic equations . . . 91
10.3 Derivation of the fundamental solution . . . 91
10.4 Application of the boundary element method . . . 94
10.5 Numerical results . . . 96
References for Chapter 10 . . . 97

11 A Parallel Non-Overlapping Domain Decomposition Dual Reciprocity Method 100
by **Kamal Shanazari** and **Ke Chen** . . . 100
11.1 Introduction . . . 100
11.2 Non-overlapping domain decomposition . . . 101
11.3 Extending the substructuring method for DRM . . . 102
11.4 Numerical results . . . 103
11.5 Conclusion . . . 104
References for Chapter 11 . . . 104

12 Analysis of Extended Boundary-Domain Integral and Integro-Differential Equations of Some Variable-Coefficient BVP **106**
by **Sergey E. Mikhailov** . . . 106
12.1 Introduction . . . 106
12.2 Co-normal derivatives and the boundary value problem . . . 107
12.3 Parametrix and potential type operators . . . 110
12.4 The third Green identities and integral relations . . . 111
12.4.1 Generalised form . . . 111
12.4.2 Canonical form . . . 113
12.5 Segregated boundary-domain integral equations . . . 114
12.5.1 Integral equation system ($G\mathcal{G}$) . . . 114
12.5.2 Integral equation system ($G\mathcal{T}$) . . . 116
12.6 United boundary-domain integro-differential equations . . . 118
12.6.1 United integro-differential problem (GD) . . . 118
12.6.2 United integro-differential equation (G) . . . 120
12.7 Concluding remarks . . . 121
12.8 Appendix – Properties of the potential operators . . . 121
12.8.1 Surface potentials . . . 121
12.8.2 Volume potentials . . . 122
References for Chapter 12 . . . 123

PART 4 — Non-linear water waves and wavelet methods 125

13 An Integral Equation Method for a Boundary Value Problem Arising in Unsteady Water Wave Problems **126**
by **Mark Preston, Peter Chamberlain** and **Simon N. Chandler-Wilde** . . 126
13.1 Introduction . . . 126
13.2 The boundary value problem . . . 127
13.3 Properties of the double layer potential . . . 129
13.4 The boundary integral equation . . . 130
13.5 Well-posedness . . . 130
References for Chapter 13 . . . 133

14 Multiwavelet Galerkin Boundary Integral Method for Laplace's Equation on Nonsmooth Boundary **134**
by **S. Amini** and **P. R. Rajaguru** . . . 134
14.1 Introduction . . . 134
14.2 Multiwavelet on $[0, 1]$ . . . 135
14.3 Integral operators over a nonsmooth boundary . . . 136
14.4 Compression of matrix scheme . . . 139
14.5 Conclusions . . . 140
14.6 Appendix – regularization techniques . . . 140
References for Chapter 14 . . . 142

PART 5 — Boundary Elements for Elasticity 144

15 The p-Version of the Boundary Element Method for Mixed Boundary Value Problems on Polyhedra **145**
by **A. Bespalov** and **N. Heuer** . . . 145
15.1 Introduction and model problem . . . 145
15.2 The p-version of the BEM . . . 147
References for Chapter 15 . . . 151

16 Rapid Re-analysis in 2D BEM Elastostatic Calculations **153**
by **Derek Scales** and **Jon Trevelyan** . . . 153
16.1 Introduction . . . 153
16.2 Acceleration of integration phase . . . 155
16.2.1 Optimisation of LUTs . . . 157
16.2.2 Refinement of look-up tables . . . 158
16.3 Acceleration of solution phase . . . 159
16.4 Numerical results . . . 159
16.5 Conclusions . . . 160
References for Chapter 16 . . . 161

PART 6 — Modelling of Scattering from Acoustics and Electromagnetics 163

17 A Brakhage-Werner-Type Integral Equation Formulation of a Rough Surface Scattering Problem **164**
by **Simon N. Chandler-Wilde, Eric Heinemeyer** and **Roland Potthast** . . 164
17.1 Introduction . . . 164
17.2 The rough surface scattering problem . . . 167
17.3 Invertibility of A . . . 169
References for Chapter 17 . . . 173

18 ADI-FDTD Splitting Methods for Two-Dimensional Maxwell Equations **174**
by **Liping Gao, Bo Zhang** and **Dong Liang** . . . 174
18.1 Introduction . . . 174
18.2 A S-FDTD Method for 2D Maxwell Equations . . . 175
18.3 Numerical experiments . . . 177
18.4 Discussions . . . 179
References for Chapter 18 . . . 179

PART 7 — Boundary Elements for Transient Problems 181

19 A Space-Time Boundary Element Method for Shock Wave in 2D **182**
by **J. X. Zhou** and **T. G. Davies** . . . 182
19.1 Introduction . . . 182
19.2 A space-time approach using the boundary element method . . . 183
19.2.1 The boundary integral formulation . . . 183
19.2.2 Discrete form of the BIE in 2D space-time . . . 184
19.2.3 Evaluation of the singular integrals . . . 185
19.3 Error indicators and adaptive scheme for space-time BEM . . . 185
19.3.1 Error estimation in space-time boundary . . . 185

19.3.2 Error indicator and adaptive process . . . 186
19.4 Numerical examples . . . 187
19.5 Conclusion . . . 188
References for Chapter 19 . . . 188

20 Improvements in Heat Conduction Calculations with Flux-based Green Element Method 190
by **Akpofure E. Taigbenu** . . . 190
20.1 Introduction . . . 190
20.2 The governing equation and Green element formulation . . . 191
20.3 The solution closure and characteristics . . . 193
20.4 Numerical examples . . . 194
20.4.1 Example 1 . . . 194
20.4.2 Example 2 . . . 195
20.4.3 Example 3 . . . 195
20.5 Conclusion . . . 196
References for Chapter 20 . . . 196

21 Tuning of Parameters Guiding B-spline Based ESO Optimisation with Boundary Elements 200
by **Jie Wen** and **Jon Trevelyan** . . . 200
21.1 Introduction . . . 200
21.2 The optimisation algorithm . . . 202
21.3 Numerical experiments . . . 203
21.3.1 Short cantilever beam . . . 204
21.3.2 Fillet . . . 205
21.4 Conclusion . . . 208
References for Chapter 21 . . . 208

PART 8 — Boundary Elements for Optimisation and inverse Problems 210

22 Efficient Evolutionary Algorithms in Electrical Impedance Tomography 211
by **N. S. Mera, L. Elliott** and **D. B. Ingham** . . . 211
22.1 Introduction . . . 211
22.2 Mathematical formulation . . . 212
22.3 Evolutionary algorithms . . . 213
22.3.1 A real coded genetic algorithm . . . 213
22.3.2 A (μ, λ) evolution strategy . . . 213
22.3.3 A (μ, λ) evolution strategy with covariance matrix adaptation . . . 214
22.4 Numerical results . . . 216
22.5 Conclusions . . . 220
References for Chapter 22 . . . 220

23 Solution of Boundary Variational Inequalities by Combining Fast Quadratic Programming Algorithms with Symmetric BEM 221
by **J. Bouchala**, **Z. Dostál** and **M. Sadowská** . . . 221
23.1 Introduction . . . 221
23.2 A model problem. . . . 222

23.3 Reduction to the boundary and discretization . . . 223
23.4 Algorithms . . . 225
23.5 Numerical experiments . . . 227
23.6 Comments and conclusions . . . 227
References for Chapter 23 . . . 228

24 On Two New and Nonlinear Iterative Methods for Total-Variation Based Image Deblurring 229
by **Ke Chen** and **Joseph Savage** . . . 229
24.1 Introduction . . . 229
24.2 Toeplitz and circulant matrices and the DFT . . . 231
24.2.1 The discrete Fourier transform . . . 231
24.2.2 Toeplitz and circulant matrices . . . 231
24.2.3 T. Chan's circulant approximation . . . 233
24.3 Discretization of the PDE and the integral operator . . . 233
24.4 Solving the Euler-Lagrange equation . . . 234
24.5 Two iterative algorithms . . . 235
24.5.1 A two-step deblurring/denoising decoupling algorithm . . . 235
24.5.2 Alternative solvers . . . 236
24.6 Numerical results . . . 236
24.6.1 Two-step method . . . 236
24.6.2 Alternative solvers . . . 238
24.7 Conclusion . . . 240
References for Chapter 24 . . . 240

25 Boundary Element Methods for Inverse Convection-Diffusion Problems 242
by **A. Rap, L. Elliott, D. B. Ingham, D. Lesnic** and **X. Wen** . . . 242
25.1 Introduction . . . 242
25.2 Mathematical formulation . . . 243
25.3 The BEM . . . 244
25.4 The DRBEM . . . 245
25.5 Regularisation methods . . . 246
25.6 Numerical results . . . 247
25.7 Conclusions . . . 250
References for Chapter 25 . . . 251

Brief BIM5 Contents

Alphabetical List of Authors . . . . . **v**

Contents . . . . . **vi**

PART I — Modelling High Frequency Radiation and Scattering 1

1 BEM for High Frequency Scattering **2**
by **Langdon S.** and **Chandler-Wilde S. N.** 2

2 Modelling High Frequency Acoustic Radiation **12**
by **Harris P. J.** and **Chen K.** 12

3 Evaluation of Highly Oscillatory Integrals **20**
by **Huybrechs D.** and **Vandewalle S.** 20

PART 2 — Boundary Elements in Coupling Problems 31

4 Preconditioners for Coupling Natural BEM and FEM **32**
by **Zhang S.** and **Yu D. H.** 32

5 Algorithm for a Cauchy Problem in Hydrodynamics **42**
by **Johansson T.** and **Lesnic D.** 42

6 Fluid-Structure Coupling for Acoustic Radiation **52**
by **Harris P. J.**, **Chappell D. J.**, **Henwood D.** and **Chakrabarti R.** . . . 52

7 BEM Analysis of Thin Film Flows **64**
by **Shuaib N. H.** and **Power H.** 64

8 Improved Boundary Conditions for BIE **74**
by **Schneider S.** 74

PART 3 — Generalized Boundary Elements for PDEs 81

9 General Derivation of Fundamental Solutions of PDE systems **82**
by **Zhang H. Q.** and **Mei J. Q.** 82

10 Fundamental Solution for MHD **90**
by **Bozkaya C.** 90

11 Parallel Domain Decomposition Dual Reciprocity Method **100**
by **Shanazari K.** and **Chen K.** 100

12 Analysis of Extended Boundary-Domain Equations **106**
by **Mikhailov S. E.** 106

PART 4 — Non-linear water waves and wavelet methods 125

13 An IE Method for 2D Non-linear Water Waves **126**
by **Preston M.**, **Chamberlain P.** and **Chandler-Wilde S. N.** 126

14 Boundary Integral Method on Nonsmooth Boundary **134**
by **Amini S.** and **Rajaguru P. R.** 134

PART 5 — Boundary Elements for Elasticity 144

15 The p-Version BEM for Mixed Boundary Value Problems **145**
by **Bespalov A.** and **Heuer N.** 145

16 Rapid Re-analysis in 2D BEM Elastostatic Calculations **153**
by **Scales D.** and **Trevelyan J.** 153

PART 6 — Modelling of Scattering from Acoustics and Electromagnetics 163

17 A Unique IE Formulation for Rough Surface Scattering **164**
by **Chandler-Wilde S. N.**, **Heinemeyer E.** and **Potthast R.** 164

18 ADI-FDTD Methods for Solving Maxwell Equations **174**
by **Gao L. P.**, **Zhang B.** and **Liang D.** 174

PART 7 — Boundary Elements for Transient Problems 181

19 A Space-Time Boundary Element Method for Shock Wave in 2D **182**
by **Zhou J. X.** and **Davies T. G.** 182

20 Heat Conduction Calculations with Flux Green Elements **190**
by **Taigbenu A. E.** 190

21 ESO Optimisation with Boundary Elements **200**
by **Wen J.** and **Trevelyan J.** 200

PART 8 — Boundary Elements for Optimisation and inverse Problems 210

22 Efficient Evolutionary Algorithms **211**
by **Mera N. S.**, **Elliott L.** and **Ingham D. B.** 211

23 Boundary Variational Inequalities and Fast Algorithms **221**
by **Bouchala J.**, **Dostál Z.** and **Sadowská M.** 221

24 Two New and Nonlinear Iterative Methods for Deblurring **229**
by **Chen K.** and **Savage J.** 229

25 Inverse Convection-Diffusion Problems **242**
by **Rap A.**, **Elliott L.**, **Ingham D. B.**, **Lesnic D.** and **Wen X.** 242
